POC 데이터베이스 - BMJ Best Practice

**Gastroenterology and hepatology**
- General surgery
- Genetics
- Geriatric medicine
- Haematology
- Health maintenance
- Infectious diseases
- Nephrology
- Neurology
- Neurosurgery

**Browse by specialty**

**Treatment algorithm**

**suspected diagnosis**
- non-neutropenic patients

**1st line:** empirical antifungal therapy

**Primary options**
- caspofungin: 70 mg intravenously as a loading dose, followed by 50 mg once daily
- or
- anidulafungin: 200 mg intravenously as a loading dose, followed by 100 mg once daily
- or
- micafungin: 100 mg intravenously once daily

**Calculators**
- Fractional Excretion of Magnesium
  Calculates fractional excretion of magnesium (used to assess hypomagnesemia).
- Fractional Excretion of Magnesium (SI units)
  Calculates fractional excretion of magnesium (used to assess hypomagnesemia).
- Fractional Excretion of Sodium
  Calculates fractional excretion of sodium, helping to assess acute kidney injury.
- Fractional Excretion of Sodium (SI units)
  Calculates fractional excretion of sodium, helping to assess acute kidney injury.
- Nasal Canula Oxygen Fractional Inspired O2 (FIO2) Estimate
  Estimates fraction of inspired oxygen using oxygen flow rate and percent.
